

## Forklift Fork Positioner

Forklift Fork Positioner - The fork positioner is actually a hydraulic apparatus which could allow the driver to operate the lift truck without leaving the seat. They are constructed out of high quality materials and are designed to endure the most challenging procedures and work surroundings. Side shifting units have the extra ability to be able to laterally position the entire load or the arms in order to facilitate much more precise lifting and position in a faster and more efficient way.

The fork pocket is quite unique and can enable the one operating it to be able to safely swing the blades into position without any fear of destroying the positioning cylinders. This allows the driver the alternative to be able to execute simultaneous or independent fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into blade positioners on existing units.
